Fujifilm PictroProof 4000 with calculator RIP, struck up software with Autokalibrator

Even if CTP causes a high degree of efficiency and high-class pit foreman's post in the pressure preliminary stage, the fact requires that by the digitization the conventional Proof is lost, in the beginning a considerable conversion. However, this seemable deficiency is compensated by Digitalproofs which are as expressive. Fujifilm offers for the digital Proof efficient High-End devices which put as regards speed and quality new graduations and all claims to a quick one

digital workflow are enough.

PictroProof delivers fast and simply high-quality farbproofs - no matter whether it is used for the internal proof of Einzelskans or for the issue of double pages. This is allowed by the variable print format which puts to the vote itself ideally at individual demands. Thanks to the integrated, user-friendly Auto-Kalibration and the Color-matchings PictroProof delivers any time equally good results, even from the files which are delivered by data distant transference. Besides, it is convincing by prominent pressure speed - within only 93 seconds the first A3-Proof is given, every other copy needs only 58 seconds. Thus informative results are very quickly available. PictroProof needs with minimum service need no chemicals, only destilliertes water. Thus can be worked in connection with the qualitatively always staying the same materials simply and standardised. The maximum standard format is A3 + (German Institute for Standardization A3 with register brands). For single German Institute for Standardization A4 pages the schmalere material can be used of course also in the portrait format or horizontal format

Fujifilm Pictro Proof in 4000

Extract from the side of the manufacturer:

Pictro Proof is a digital Halbton-Proofsystem which is based on the Pictrography technology.

Pictro Proof is suitable as qualitatively high-quality Proof for the internal high-class control just as for the use as a Kontraktproof.

On the base especially in the photographic area worldwide established and proven Pictrography in 4000 of system delivers of the Pictro Proof results which come up very near to the final printed product. Condition for this high quality is the exclusive Fujifilm TDDT technology (Thermal Development & Dye transfer), extends by new materials and colour adaptation software called MTS. Fujifilm has developed a new Donor material which reproduces stable colours CMYK which come up very near to the printed end product. In addition, different paper colours can be simulated.

One of the biggest advantages lies in the speed of the Pictro Proof. As soon as the data were sent to the printer, the first double page is given within only 93 seconds. Then other copies follow in each case after 53 seconds. An especially developed half-matt paper is delivered in the size up to A3 + (315 x 462 mm), largely enough for A3 including register brands or a double page German Institute for Standardization A4. The system is also able to expose material (254 x 315 mm) on German Institute for Standardization A4 +.

The car Calibrator in the Pictro Proof delivers constant quality simply at the touch of a button.

In the combination with the Fujifilm Celebra-NT RIP the ribbed records can be used for the Pictro Proof as well as for film and Plattenbelichter. Because the issue data of the same RIP come, the issue on film or pressure plate is practically identical.

The Pictro Proof needs on account of his exclusive technology neither a developer nor a fixation and, hence, is especially ecologically friendly.

The Fujifilm Pictro Proof has already set up since some months in the German market.

Please only contact us via our registration form and only if you are a business person yourself. Every offer is subject to prior sale and includes your acceptance to our terms & conditions [Terms and conditions \(AGB\)](#). All logos and trademarks on this site are the property of their respective owners.

You will always receive an invoice including tax, which can be paid via wire transfer, in advance or cash. If you register on paypal, you may also pay by charging your paypal account with your credit card. If you are an EU member and you have a validated tax number which can be validated here: [VIES VAT number validation / MwSt.-Informationsaustauschsystem MIAS\) Validierung der MWSt.-Nummer](#) then you pay tax-free. If you are from outside the EU, you can only pay tax-free, if the export is done with the transport company, called 'Schenker'. If you are not using 'Schenker', we cannot guarantee that we will get the export confirmation in time. In that case, you have to pay tax and you get it.
