

Microsoft Virtual PC for Mac 6.1

Microsoft Virtual PC for Mac

Version 6.1 for Mac OS X and Mac OS 9

Virtual PC for Mac version 6.1 delivers true PC compatibility by enabling your Mac to run Windows applications, access PC networks, use Windows-only Internet applications and share files with PC-based colleagues. Virtual PC provides you with the functionality and compatibility of a Pentium PC through sophisticated software emulation of the standard Intel chip set and other hardware components. It's like putting a powerful PC inside your Mac. You can run your Windows or DOS software - including business, education, Internet and home applications - just as you would on a PC. Let's face it, you love your Mac but sometimes you need the ability to run Windows applications. With Virtual PC you can now emulate an entire PC without any additional hardware costs. Virtual PC lets you run one or more fully functional, emulated PCs on your Mac and is compatible with a full range of operating systems including Windows XP, 2000, Me, 98, 95, NT, as well as DOS. You are limited only by your current machine's RAM and disk space. Virtual PC is a true Macintosh application that uses standard Mac controls and commands. It has the user-friendly interface that is important to Mac users - keeping you productive and minimizing the learning curve.
